**Course Objective**

This course aims to equip students with foundational and advanced concepts of **Machine Learning**, enabling them to develop models for data-driven decision-making. The course is designed to provide a

**theoretical understanding** of machine learning algorithms and practical hands-on experience in implementing them to solve real-world problems. The course will cover **supervised and unsupervised learning methods, deep learning architectures, and domain-specific applications** such as **computer vision and natural language processing (NLP)**.

#### Knowledge Profile

K4: Forefront engineering specialist knowledge for practice  
K5: Engineering design  
K6: Engineering practice

#### Learning Domains

Cognitive – C2: Understanding, C3: Applying, C4: Analyzing, C6: Creating  
Psychomotor – P3: Precision, P5: Naturalization  
Affective – A4: Organizing

#### Program Outcomes (POs)

PO2: Problem Analysis  
PO3: Design/Development of Solutions  
PO5: Modern Tool Usage  
PO12: Life Long Learning

#### Complex Engineering Problem Solution

EP1: Depth of knowledge required  
EP2: Range of conflicting requirements  
EP3: Depth of analysis required  
EP4: Familiarity of issues

#### Complex Engineering Activities

None

#### Course Outcomes (COs) with Mappings

After completion of this course students will be able to:

| CO  | CO Description                                                                                                                                                                                        |
|-----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CO1 | Demonstrate an <b>understanding</b> of supervised and unsupervised learning algorithms, <b>apply</b> them to various datasets, and <b>analyze</b> their effectiveness in solving real-world problems. |
| CO2 | Gain an <b>understanding</b> of neural networks and deep learning architectures, <b>apply</b> them to complex data-driven problems, and <b>analyze</b> their performance.                             |
| CO3 | <b>Analyze</b> and <b>evaluate</b> different machine learning methods to determine their strengths, weaknesses, and suitability for various types of learning problems.                               |
| CO4 | <b>Design</b> and <b>implement</b> machine learning and deep learning models using modern libraries and effectively communicate the findings through reports and presentations.                       |

#### Course Topics, Teaching-Learning Method, and Assessment Scheme

| Course Topic | Teaching-Learning Method | CO | Mark of Cognitive Learning Levels |    |    |    | Mark of COs |

## Teaching Materials/Equipment

### Text Book:

Machine Learning an Applied Mathematics Introduction, 5th Edition by Paul Wilmott

### Reference Materials:

1. Mathematics for machine learning, Marc Peter Deisnroth, A.Aldo Faisal and Cheng Soon Ong.
2. Deep Learning, Ian Goodfellow, Yoshua Bengio and Aaron Courville.
3. Hands-On Mathematics for Deep Learning, Jay Dawani
4. Python Machine Learning, 3<sup>rd</sup> Edition, Sebastian Raschka and Vahid Mirjalili

**Teaching Materials:** Lecture Notes\*, Reference Book, and instruction of python.

**Teaching-Learning Method:** Lecture Notes\*, Assignment.

*\*Lecture Notes that are required for the course will be delivered during class.*

## Exam Dates

As per schedule provided by the university.

## Academic Code of Conduct

### Academic Integrity:

Any form of cheating, plagiarism, personification, falsification of a document as well as any other form of dishonest behavior related to obtaining academic gain or the avoidance of evaluative exercises committed by a student is an academic offence under the Academic Code of Conduct and **may lead to severe penalties as decided by the Disciplinary Committee of the university.**

### Special Instructions:

- Students are expected to attend all classes and examinations. A student **MUST** have at least 80% class attendance to sit for the final exam.
- Students will not be allowed to enter into the classroom after 20 minutes of the starting time.
- For plagiarism, the grade will automatically become zero for that exam/assignment.

- Normally there will be **NO make-up exam**. However, in case of **severe illness, death of any family member, any family emergency, or any humanitarian ground**, if a student miss any exam, the student **MUST** get approval of makeup exam by written application to the Chairperson through the Course Instructor **within 48 hours** of the exam time. Proper supporting documents in favor of the reason of missing the exam have to be presented with the application.
- For **final exam**, there will be NO makeup exam. However, in case of **severe illness, death of any family member, any family emergency, or any humanitarian ground**, if a student miss the final exam, the student **MUST** get approval of **Incomplete Grade** by written application to the Chairperson through the Course Instructor **within 48 hours** of the final exam time. Proper supporting documents in favor of the reason of missing the final exam have to be presented with the application. **It is the responsibility of the student to arrange an Incomplete Exam within the deadline mentioned in the Academic Calendar in consultation with the Course Instructor.**
- All mobile phones **MUST** be turned to silent mode during class and exam period.
- There is **zero tolerance for cheating** in exam. Students caught with cheat sheets in their possession, whether used or not; writing on the palm of hand, back of calculators, chairs or nearby walls; copying from cheat sheets or other cheat sources; copying from other examinee, etc. would be treated as cheating in the exam hall. The only penalty for cheating is **expulsion for several semesters as decided by the Disciplinary Committee of the university.**
